PROFESSIONAL SUMMARY

Audit analytics and cybersecurity professional currently supporting UNICEF's Office of Internal Audit and Investigations in New York, where I analyze system data, build risk metrics, test access controls and deliver Power BI dashboards that inform audit planning. Holds dual master's degrees in Cybersecurity and Big Data Analytics, three peer-reviewed publications including research on generative AI risk, and 5+ years across controls, risk assessment and security awareness in regulated environments (NIST CSF, ISO 27001, HIPAA).

EDUCATION

M.S. Cybersecurity May 2026
Yeshiva University, Katz School of Science and Health
M.S. Big Data Analytics May 2024
Chinhoyi University of Technology
B.S. Honours, Computer Science September 2021
University of Zimbabwe

RELEVANT EXPERIENCE

Internal Audit Intern — UNICEF, Office of Internal Audit and Investigations (OIAI) *October 2026 – Present*
- Support audit engagements with data-driven evidence by analyzing system data and developing risk metrics that inform risk assessments.
- Help prioritize audit focus by identifying the audit universe and assessing risks across it.
- Strengthen control testing by analyzing role-based access control (RBAC) matrices against access control policies to identify discrepancies and control gaps.
- Detect deviations from standard processes by performing process mining and discovering process variants.
- Help audit teams identify emerging risks and plan engagements by building Power BI reports and dashboards that turn complex audit data into clear, actionable insights.

Offensive Cyber Expert — Mercor.io Corporation (Contract) *July 2026 – August 2026*
- Assessed generative AI safety by designing prompt-injection and multi-turn jailbreaking (Crescendo) attacks against LLMs.
- Evaluated model refusal patterns and edge-case behaviors using taxonomy-driven safety frameworks.
- Tested how models protect privacy and sensitive information, handling confidential findings with senior reviewers.

Cybersecurity Intern — Peblink *January 2026 – May 2026*
- Responded to incidents by triaging alerts, analyzing indicators of compromise such as source IPs and failed sign-in patterns, and containing the threat with inbound NSG/firewall and ACL rules, eliminating repeat incidents.
- Supported remediation by tracking critical, high, and medium server vulnerabilities from Tenable scans through risk-based corrective actions and validating closure in clear reports.
- Documented security findings and lessons learned for the Somaliland Health Intelligence Initiative.

Information Technology Coordinator — Plan International *February 2022 – January 2025*
- Reduced unauthorized access risk by 25% by leading change management for the MFA and BitLocker rollout to 300+ staff across four offices, driving technology adoption.
- Maintained 99.9% uptime by delivering customer service through L2/L3 support and ServiceNow ticketing, coordinating vendors and procurement, and reduced unauthorized access incidents by 15% through Active Directory and Exchange access controls.
- Strengthened cybersecurity awareness by hosting a security campaign on KnowBe4 (LMS), running simulated phishing attacks, educating staff, and tracking metrics to assess cyber resilience.

Information Technology Intern — Plan International *September 2019 – September 2020*
- Triaged 30–40 SIEM alerts daily, reducing the false positive rate by 15% through custom correlation rules in Splunk.
- Monitored enterprise systems and network performance, ensuring 99.9% uptime through proactive patch management, security hardening, and escalation of anomalous events to senior staff.
- Assisted in triaging and resolving IT security and operational tickets, documenting incident history, resolution steps, and root causes to build a reusable knowledge base for the support team.

LEADERSHIP & PROJECTS

Vice President — ISACA Yeshiva University Chapter, New York (July 2025 – July 2026)
- Helped lead a 150+ member chapter, managing program operations and member engagement across volunteers.

RAID-SecOps (PulseGuard) — AI-Powered Security Operations Platform
- Co-built a role-aware platform that detected threats across 15 attack categories with 99.67% accuracy and turned security events into tailored recommendations for analysts and GRC teams with a MITRE ATT&CK contextual layer that maps detected threats to adversary tactics and techniques, giving analysts attack-path context.
- Built incident response playbooks and a three-role SOAR workflow that guide analysts through triage, containment, recovery, and lessons learned.

PUBLICATIONS

- The Shadow AI Dilemma: Redefining Insider Threats and Security Architectures in the Era of Unsanctioned LLMS — *IJCA*, 2026
- Mitigating Deepfake-based Impersonation and Synthetic Data Risks in Remote Healthcare Systems — *IJCA*, 2025
- Crowdsourcing Cyber Resilience: A Community-Based Approach to Threat Chronicles and Zero-Day Defense — *IJSMR*, 2025

SKILLS

Control testing, risk assessment, IAM and access reviews (RBAC, least privilege), Power BI, SQL, Python, NIST CSF, ISO 27001, HIPAA, generative AI red-teaming, security awareness training (KnowBe4), stakeholder coordination, incident detection and response, MITRE ATT&CK, SOAR workflows, SIEM triage and alert tuning (Splunk, Microsoft Sentinel, Defender), KQL detection rules, threat analysis, root cause analysis, escalation and incident documentation, vulnerability management (Tenable), firewall/NSG and ACL hardening, Active Directory, Microsoft 365, JavaScript, ServiceNow, Cisco Meraki MDM
